

CASE STUDY – *The Royal Chelsea Hospital*

- **Client:**

Commissioners of the Royal Hospital

- **Architect:**

Quinlan Francis Terry

- **Principal Contractor:**

Wates Construction Limited

- **Value:** £1.1 Million

- **Date:** 2008

Description

Stonewest used a combination of Anstrude Roche Clair and Messangis Clair stone imported from France especially for the project of recreating a representation of the original hospital a short walk from the project site.

The works involved:

- The works included structural masonry as well as cladding, using 3mm joints with very fine tolerances during the manufacture and fixing of the stones.
- The new build structure implemented traditional masonry techniques, such as the use of lime mortar.
- Stonewest also implemented an on site quality control system, thoroughly checking over all stones upon delivery to make sure that only the finest quality materials were used on the project.
